

Sample Paper Title: Instructions for SPRAT XXIII Abstract Submissions

Sample Author #1, Author Affiliation

Sample Author #2, Author Affiliation

In order to ensure the proper evaluation of abstracts submitted to the 23rd Space Photovoltaic Research and Technology Conference, all authors are requested to submit an Extended Abstract. Extended Abstracts are not page-limited and may include the appropriate graphs, tables, sketches and photographs necessary to convey the technical details, relevance, and impact of the submission. The Extended Abstract should include the paper title, all authors and their affiliation, and a designated correspondence author with appropriate contact information (complete mailing address, phone number, and e-mail address). Extended Abstracts may be in Microsoft Word, plain text, or PDF format.

In addition to your Extended Abstract, a Publication Abstract is requested. For those abstracts that are selected, the Publication Abstract will be included in an abstract booklet handed out at the conference. The Publication Abstract is limited to one page and should follow the format used for these instructions. The Publication Abstract should include the paper title, all authors and their affiliation, body of the abstract, and the technical point of contact for further questions. It is recommended that justified Times 11 point font be used for the body, Times 14 point Bold for the paper title, with surrounding one-inch margins. The Publication Abstract should be submitted in a Microsoft Word or plain text format. While not encouraged, figures/pictures may be used in the Publication Abstract where suitable, as long as the one page limit is not exceeded.

Please e-mail all abstract submissions to Barbara Madej at barbara.h.madej@nasa.gov. Note that the deadline for abstract submissions is September 19, 2014. Further information on the SPRAT conference may be obtained at the SPRAT website. <http://www.grc.nasa.gov/WWW/SPRAT/>.
